Israel's mistrust makes Mid-East peace uncertain

Will a frash Arab-Israeli war break out batween now and the New Year? Following the failure of mediation by Joseph Sisco of the US State Department the prospects of prolongation of the

case fire are poor.

When the armistice came into force on 7 August 1970 Israeli Defence Miniter Moshe Dayan falt It represented an important step forwards in the direction of coming to an agreement. Similar

political comments were made in Cairo. Hopes foundered on the realities of the situation, Neither Gunnar Jarring of the United Nations nor American mediators have been able to report progress. President Sadat of Egypt now feels there is no longer any alternative to war.

Even though Cairo has intimated its

willingness to make concessions (President Sadai aven under two letter to recognition the State of Israel following a peace withment) Israel lius not budged from its position. At all events there is no aign of the more flexible approach recommended

y several Western powers.

It is a several was a several w repolitions with the Amb countries

to say the lasst, one can but lead is also not prepared to state prior leace talks what occupied territory it is lorelinquish and which it is not leaded to return. This too has made the leader's work more difficult.

The Experient view is that the only make solution to the frontier problem

gained by force of arms in 1967.

There ere signs, however, that this may not be Ceiro's final word on the subject: Concessions in, say, the form of demili-tarised aress are quite conceivable.

For months the Americans have been

urging a partial solution on both sides, meaning first and foremost the reopening of the Suez Canel. In certain circumstances Isreel would be prepared to withdraw from the canal but only on condition that Egypt did not then occupy the East Bank.

Washington's proposal that Egypt station tokan units on the Eastern side of the canal feiled to meet with epproval in Jerusalem and in Calro too the answer was no, even though this again did not eopear to be final.

In the meantime both sides have armed themselvas to the teeth, Israel with American, Egypt with Soviet essistance. Egypt is prepared to strike before the year is out, President Sadat has threatened for some days.
Egypt requires Soviet backing for a new

war, though, end relations with the Soviet Union have worsened considerably since events in Sudan, where Moscow gave the Communist-Inspired putsch its blassing,

There is no getting oway from this fact, friendship pact or no friendship pact, and the new situation leaves many questions

On the one hand Moscow is intent on regaining lost ground, on the other it cannot afford to allow itself to be manoauvred into a position that might lead to direct confrontation with the United States.

How, then, can the Kremlin be expected to bahave? There can be no doubt that aggravetion of the Arab-Isreeli confliot provides Moscow with an opportunity of reminding the Arabs yet again how dependent they ere on the Soviet

China's invitation to President Nixon to visit Peking must have come as a greater shock to the Soviet Union than virtuelly any diplomatic move in recent

It is not only the polemics against Peking's foreign policy that have grown perceptibly harsher in tone. The Kremlin evidently facis that a political system that in the course of countless confrontations and, latar, negotiations with the United Statea is in danger.

Crisis prevention and safeguarding of the peace, brought about by means of a language of political and diplomatic amoke signals, is the foremost consideretion of Soviet diplomacy.

Two superpowers could reach agreement on a system of safeguards because moves, counter-moves and readily assessable interests are involved. The emergence of a third factor, not to mention even more, makes matters that much more difficult.

This is one of the reasons (over and above hegemonial interests) why the

Russian Sports Minister in Bonn

Sergei Paviov (right), the Soviet Minister for Sports, has visited the Faderal Republic for taiks with Hens-Dietrich Ganscher, the Federal Republic Minister responsible for sport. Sergei Peviov elso met Bundestag mambers who serve on the Bundestag committee for sport and the Munich Olympia Games.

Union and the Russians can be expected situation to their own benefit.

special point of being the defenders of Arab interasts when the crisis in the Middla East has been at its height. Veiwed in this light aggravation of the conflict can but be welcomed in the

The question is, though, how great their influence on Egypt, the principal Amb country, is et present and how much leaway they will allow the Arabs estreint because of the Americans.

for one thing or the other.

The Israeli government mistrusts both great powers, in America's case because Washington has of late increased its pressure on israal. The United States has on more than one occasion made proposals involving a gradual Israeli with-

drawal. israel has rejected these proposals one by one, talking in terms of American pressure that must be resisted. There has even been jalk of false friends.

How can peace come about in circumstances such as these? During Mr Sisco's nission Secretary of State William Rogers noted that frontiers alone are no guarantee of Israeli security, ile has thit the nail on the head.

Jerusalem need not bother hoping for paace es long as it fails to grasp the fact.

Hans Rademacher
(Kölner Stadt Anzeiger, 16 August 1971)

The world must learn to live with Red China

Soviet Union refused in 1959 to build up its own nuclear force.

Chinese diplometic activity in Asia, Chinese membership of the United Nations, even another direct frontier clash is something Moscow could stomach, But to forfeit the monopoly of negotiation with the United States on behalf of all Communist Parties and countries, for Peking to embark on a policy of its own towards the United States, is, as far as the Sovict leeders are concerned, to take things too far.

Semi-official reactions from Moscow bear witness to virtual panic, Take, for instance, the Pravda commentary claiming that Washington and Peking were in the process of conspiring to divide the

world between them.

To judge by the tenor of the article one would have thought that America end

China have much more in common flian differences of opinion and that Mr Nixon had already met Chairman Mao and the two men had elready signed treaties of

one kind and enother.

Magyar Hirlap, a Hungarian paper, took an even gloomier view of the prospects.

Chou En lai was already envisaged as the architect of an anti-Soviet axis extending from Belgrade to Tirana and Bucharest. Speculation of this kind is clearly Soviet-

China's re-entry to the world's stage has admittedly changed the room for man-oeuvre in Eastern Europe. It is bound to have some affect on traditional post-war power blocs

It would nonetheless be a mistake to assume imperial designs on China's part. At present the People's Republic neither has cause nor power enough to have any such ambitions.

The world must leern to live with China. It rather looks es though the Sovict Union is going to have the greetest of difficulty in so doing.

(Frankfurter Rundschau, 14 August 1971)

FOREIGN AFFAIRS

Salt talks could serve a useful exchange-of-ideas function

Salt has for many people in this interested in reaching sgreement in the country remained a somewhat vague course of the Vienns and Helsinki tslks. abbreviation. Few people are going to abbreviation. Few people are going to deny that talks on a limitstlon of the significance of the momentum of negotisnuclear arms raca between the superpowers are linportant but these topsy-turvy disarmament negotiations aimed at not s reduction but a freeze in missile potential could hardly be expected to become

Above all they were unlikely to become popular in Europe where since the onset of the Salt talks in November 1969 it has been feared that the superpowers might come to terms at Europe's expense.

The strict secrecy observed by Washington and Moseow in respect of their exclusive talks have not made the missile dispute any the clearer despite the occasional leaks to the press.

Last but not least the strategic srms limitation talks are a complicated business calling for expert explanation and the pundits have had remarkably little to ssy for themselves of late.

This silence could mean that the pundits know no mora than the man in the street. On the other hand it could also mean that the talks have reached such a tricky stage that unduly daring forecasts could put the cat among the pigeons. What, then, is the position this summer?

According to one of the best-informed men on the subject, Isn Smart of the London institute of Strategic Studies, the position is surprisingly satisfactory. He feels it is not going too far to suggest that a limited Salt agreement may be reached before the year is out.

For doniestic and social reasons hoth sides have if anything grown increasingly systems.

tion and to view the Salt talks themselves

THE GERMAN TRIBUNE

as a stabilising factor. The deciding factor, however, is a lesson both the Soviet Union and the United States have learnt in connection with their mutual relations, a lesson that has run parallel to the Salt talks.

While the world's attention has been directed to the negotisting teams in Vienna and Helsinkl both Moscow and Washington have modified their respective outlooks. It is characteristic of this state of affairs that the most speciacular review of progress so far has been made not at the conference table but in the American capital.

On the one hand Washington has had to shed the arrogance of its intention of tesching the Soviet Union what constitutes nuclear strategy; on tha other Moscow has had to abandon its uncompromising attitude as concealed by a genuine or apparent lack of interest in the

Western arguments on strategic matterns. Both sides have learnt from and shout each other. Communications have incressed and with them willingness to reach partial agreement on anti-ballistic missile

Not, for that matter, that a treaty which may be drafted but is unlikely to be signed this year will result in total renunciation of anti-missile systems. For this the deterrent systems are too sluggish and both superpowers have already invested too heavily in their respective

The Soviet Union has its 64-missile mini-slield around Moscow which admittedly in military terms hardly stands up to comparison with US overkill capacity. The Americans have their bases designed to protect Minuteman missiles in North Dakota, Missouri and Montana. also as yet but a fragmentary system.

t28, double the number of Soviet ABMs, could turn out to ba a coinpromise formula. This would seem to be borne out by a 'disclosure' by the New York Times at the end of last mouth.

Apparently tha US delegation in Fielsinki has suggested an alternative solution to the effect that the two governments choose between a hundred missile shield surrounding the capital city and three hundred missiles or so concentrated at three points with the intention of shielding counterstrike capacity.

There has been no official confirmation of this report but it would seem plausibly to round off the impression that a partial agreement is in the offing.

If Salt is to be a success It is unportant that both sides go further and hit upon a means of further progress in the field of offensive weapons. This puts the United States in something of a dilemma.

Assuming, as Washington tends to do, that the Soviet Union has the edge in SS 9, SS 11 and SS i3 ICBMs there must be some reduction uf this potential if the balance is to be restored.

But at present Washington has nu counter-concession to make that is sufficiently interesting from the Soviet Union's point of view. In certain circumstances America might first have to bnost its potential in order to disarm un a tit for tat basis.

Witether intentiunally ur not a tactical arms prugramme of this kind cuuld add fuel to the arms race fire. if only to preclude expensive and fateful misunderstandings of this kind Sult ought to establish itself as an institution and means of communication between the super-Christian Potyka

unusual complications that have come not only from the heavy of continued mistrust which is a over from the past, but above all the vasily differing visions of that west are entertained in the Eest

Both sides are agreed that they want to

re-constitute the Euro-Asian continent but the two base their ideas on vastly different patterns and have diametrically opposite aims.

The Soviet Union has visions of a Greater Europe stretching from the Urals to the Atlantic and freed from all influences from outside Europe, and for tlus reason the USSR would have a natural hegemonial role to play.

The West, on the other hand, has to a

certain extent still got John F. Kennedy's "Grand Design" in mind, that is to say the Atlantic Community, that structure that would be held up by two pillars, tha United Stetes of America and Western Ептопе.

The only difference now is that the idea of a jointly-owned house has largely given way to the concept of a partnership and alliance.

But for all those involved on the Western side the number one thesis is: "On no account can America be left

But the fact that both sides have differing points of view has never been a reason for hampering negotiations either in politics nor in other spheres of living such as commerce.

Once again this case has shown that the mere act of sitting at a table, looking each other in the eyes, trotting out the old old arguments as if fmni a gramophone record can give a momentum to the business that opens up completely new possibilities.

There is a mutual process of learning, a spark from the interaction of two conflicting aldas that could never be created hy cither side un its own. This spark takes on life, grows . . .

Personally i can see four positive results fram the past twelve months:

Firstly: Bonn's first step towards normalisation with the communist East has met with genarul opprovol from all over the world. The treaty of 12 August 1970 has rubbed the East Bloc of the opporunity of using the Federal Republic as a permanent bogeyman to keep subjects in order. Fear of a Gorman counter-revolution was the reason for building the Wall in 1961 and was still used as on excuse in 1968 when Warsew Poct troops raped Czechoslovakia. But by December 1970 when unrest broke out in Polond the German influence could no longer be cited. Tha new politics have lifted the opinions of the Federal Republic heid by our Western Allies and the Third World to a new high that has not yet been fully appreciated here. Without this new line it would have been impossible for the Federal Republic to keep up with the dynamic new political developments that are racing forward all over the world.

Secondly: The fact that Bonn made ratification of the treaties dependent on a setisfactory conclusion to the Berlin talks difficult part of the negotiations, namely The difficulties in fact only came to made the reaponsibility of the more powerful Western Aliea. Also this has has once again become the focal point for Atlantic area countries have atressed, not apeed the present ambassadorial talks only within the acope of Nato but also ference cao be made to come true.

Thirdly: Recognition of the Oder-Neisse Line as tha western border of

Chancatior Willy Brandt and Soviet Premiar Alexel Kosygin signing the Moscow Treaty on 12 August 1970 in the Kremlin

"reserved Hallstein Doctrine" being sunk without trace. At the end of 1967 with pressure from Moscow and Esst Berlin all socialist countries came to a tacit agreement that none of them take up diplo-matic relations with the Federal Republic before West Germany had recognised the German Democratic Republic in international law. This condition no longer applies since the signing of the treaties. The Poles have agreed to en exchange of ambassadors as soon as the Warsaw Treaty has bean ratified.

Fourthiy: Aithough it cannot be proved and can only be assumed one result of the past twelve months' work is the fact that the GDR is no longer directly demanding recognition in internationa law through Bonn. It is only making the justified claim that treatics concluded with Bonn should be answorable to international law. It was clear os long ago as May that a breakthrough had bean made in the ambassadorial negotiations on Berlin, when the Soviet Uninn once ogain took over the rasponsibility for free access from the Federal Rapublic to West Berlin and no longer treated this as a

sovereign right of the GDR. One objection constantly being raised by opponents of the new policy line is the tempo of which the Ostpolitik is being carried out. It is said that the government is acting far too hastily and that everything is being senselessly hurricd along. Senseless? It would have been quite senseless to keep the Soviets on a string when they were ready, willing and

eager to get negotiations going. Andrei Gromyko'a recent visit to India underlined that there are good grounds for the Soviet getting a move on. On tha Friday It was announced that Gromyko would be going to New Delhi for five days. On the Sunday night he arrived there and on the Monday morning the treaty of friendship and essistance was

Negotiationa with Bonn and those involving the ambassadors in Berlin were not carried out with anything like aa offered the advantage that the most much alacrity, but by Russian standerds

Gräfin Marion Dönhoff (Die Zeil, 13 August 1971)

Poland has led to Walter Ulbricht's Disarrayed Opposition scorns Brandt's cooperation offer

Süddeutsche Zeit und

hancellor Brandt's latest offer to the CDU/CSU Opposition for more intensive ecoperation in future on important foreign policy questions, which has been made as a result of the growing nerviness at the domestic policy debates concerning the Berlin Question, is a warning to the right-wing that the permanent confrontation in the Bundestag must come to an

This offer and political appeal should not be misunderstood as a political move to try to seek the Oppositions'a assistanco, born of onxioty. Willy Brandt's reassurance that neither his government nor the Western Allies will accept any solution to the Berlin problem that is other than satisfactory is evidence enough that the Chancellor is clear in his mind uf the way alread.

For greater cooperation between govcriment and Opposition to come abuit on important matters of foreign policy requires more than simply the good will of the government. The SPD/FDP will obviously continue to pursue the policies they consider right and proper, and which are backed by the Majority.

The Opposition has already rejected one government offer - that it would be allowed to send a representative along os an observer at the negotiations in Moscow, and later in Warsaw.

When It came to the Berlin problem they accepted the offer, but the confusion within the ranks of the CDU/CSU about responsibilities and who can ba informed by the government of the decision that is finally made by the Western Allies on Berlin Is not a particularly encouraging foreboding.

If the CSU complains that only

floor leader of the Opposition in the Bundestag, Rainer Barzel, and occasionaliy Richard Stücklen are kept au fait with tha lotest developments the question arisea: how many leaders has the Opposi-

Until the CDU/CSU anawer this question the desirable greater cooperation between government and Opposition on foreign policy matters, inasmuch as this requires an exchange of confidential information, will be difficult to achieve.

This is especially true considering the divergent ideas on foreign policy that undarlie tha present battla for the leadership of the CDU/CSU.

(Säddeutscha Zeitung, 1 t August 1971)

Indian critics of the Indo-Soviet friend-A ship pact are not wholly unjustified in viewing it as the first step in a new Cold War in Asia following the improvement in Sino-American relations and the prospect of pracisely the reverse a relaxation of the tension that has made Asla die most crisis-prone continent of them all so far.

The Moscow-New Delhi pact drives the wedge If Sino-Soviet rivalry deep into the heart of Asia, though of course having different interests the two sides will have had different motives.

On signing the pact Soviet Foreign Minister Andrel Gromyko atressed that the Soviet Union was not motiveted by temporary factors. There is every reason for believing his claim that the Bengal crisis has not been instrumental in leading to the agreement as far as Moscow is

There cannot even be certainty as to whether Moscow considers the danger of a war between India and Pakistan to be as grave as India evidently feels (and necessardy must feel to be) the case.

It has not been Pakistani President Yahya Khen's blood and thunder speeches that set Mr Gromyko heading in the direction of New Dehli. The immediate reason was Sino-American rapprochement which put a spoke in the wheel of Soviet plans to offer to protect Asian countries following the American withdrawal.

Following the reappraisal in Asia and the evident desire on everyona'a part to come to terms with China there was only one country left with which to salvage the remainder of this concept, India. And India swallowed the Soviet bait.

In the circumstances the fine words to the effect that the Indo-Soviet pact represents the beginning of a new era in the rast of Asia, will take a dim view of Asia are a trifle larger than life. New eras other Asian countries establishing too do not begin all that often.

India's non-alignment policy sacrificed to Kremlin's bait

It all began with President Johnson's resoive to confer with the North Victnamense in Paris. Everything since has been a logical consequence of that first

There is more point in noting that india may yet live to regret the haste with which it made certain of Soviet support in the event of conflict with Pakistan.

India has now let Itself in for a aituation not dissimilar to that which faced this country under Konrad Adenauer. It prefers to evade the necessity of coming to terms with its weaker and immediate neighbour, China, instead seeking the protection of an ally that is not an immediate neighbour, has other interests and consequently may change its prio-

In return for tlus uncertain reward Iadia may now consider itself to be tha principal agent of Sovlet interesta in Asia. It remains to be seen whether or not this is e desirable aim apart, of course, from

the India preoccupation with Pakistan. India has been on a limb in Asia before: without frienda because it was too wcak for the powerful countries, too powerful for the weaker countries and too poor, too arrogant and too undecided for

Thare could now even be a cliange for the worsa since China, which for a variety of reasons exercisas a far greater spell on cordial relations with India as an ally of

the Soviet Union. In Chinese eyes this wuuld now constituto nn unfriendly act and who in Asla wuuld in the present circumstances want to arouse Chinese

The reat of the world would like first and foremost to knuw whether the Indo-Soviet pact improves or worsens the prospect of war between India and

Provided it is limited to the pre-Napoleonle manoeuvrea of the 1965 conflict a war noed not have scrious international repercussions. When all Is said and done the 1965 conflict did not

The situation would, however, be a hardly be said to be moving in the good deal more critical if China, as Pakistan'a partner, and the Soviet Union, as India's partner, were to be involved. In view of the new and old ties of both sidea opinion in Delhi and Islamabad now counts for less than opinion in Moscow

and Peking. On the other hand had they wanted a pretext for major confrontation both Moscow and Peking could have chosen aarlier and better occasions. The stance, would have presented a more plauaible opportunity as far as the general public in Russia and China are concerned than tha fate of Bangla Desh, about which the man in the street in Moscow or

Peking is a trifla hazy, to say the least. More than aver before India's resolves. moves and non-moves will reflect those of the Soviet Union. India can no longer act on, say, war with Pakistan without first gaining Moscow'a blessing, It will come as a sad blow to many

people in New Delhi that this is what has come of India's proud policy of nonalignment.

Thilo Bode (Süddeutsche Zeitung, 12 August 1971)

BOOK REVIEWS

Two new books provide interesting review of past 100 years of German history

VORWARTS

rt, literature and science do not exist A in a vacuum remote from society and politics. The tendencies that give an age its specific intellectual and cultural stamp effect the social and political arguments of the time and are influenced by them in their turn.

This complex inter-relationship between polities and culture, art and society means that it is difficult to give a short but accurate account of the cultural history of a particular age.

A venture such as this demands a seuse of proportion and a talent for skilful presentation as well as a thorough knowledge of the subject. This is especially trne of an age like the Weimar Republic which had so many conflicting features that opinions about it are still mixed today.

A myth has grown up around the culture of the Weimar Republic - the myth of the Golden Twentics, Some people dismiss it as a left-wing-inspired legend wittle others remember it as the one saving grace of an otherwise gloomy

Peter Gay's work skilfully outlines the basic features of the cultural und jutellectual life of this period. He succeeds above all in presenting a lasting impression of the intellectual tensions between the German Empire and the Nazt

Creative achievements found a ready public in Germany with the attempt to emphasise Germany as a country of lyric poetry, humanist philosophy and peace ful cosmopolitan life now that the Germany inspired by Bismarck and Schlieffen had been destroyed. Progressive and experimental tendencies came to the forefront in science, literature and tha

The Weimar style now achieving its breakthrough had grown up during the German Empire as the product of the outsiders of Wilhelminian society who now seized the chance offered by revolu-

The Republic in which it developed was also a political and social venture of the outsiders of established society -Democrats, Socialists and Jews.

The opportunitles offered by the new political system were first gladly welcomed by the new cultural movements but soon the hopes of the intellectuals were far in advance of the real political situation. Few intellectuals became passionate

advocates of the Republic. The most it could hope for was tolerance from those cople such as Gustav Stresemann and Thomas Mann who gradually came to accept the Republic though praferred a were the fundamental rules of demobasically non-political reconciliation bebetween right and left wings.

Those intellectuals who were committed to the Republic tried to form a critical consciousness in their various disciplines in the hope that this would be applied to all branches of life. But they were isolated within the conservalism of the universities and were far from the centre of political life.

The people who accepted the Republic as a matter of convenience and the critical intellectuals later found due recognition abroad for their achievements.

But their influence on developments in the Weimar Republic was as negligable as polltical system and the type of electoral the influence of reason and critical process cannot only be seen at the painful

itical life of Germany.

Poetry was a much greater influence on the thought of the time as it depicted a better world, a world that was still intact. forming a contrast te the realities of life.

The strong influence of the George circle, Rilke and the Hölderlin, Kleist and Büchner revivals illustrates the attraction of the view that poetry banished the "superficial thinking" of the Enlighten-

The widespread tendency to attach more importance to poets than philosophers was the practical consequence of the rejection of all politics and an eacape from the fight between the political parties into irrationalities that were no less political in effect.

The tidrst for totality, this fear of modernity, was fostered by a chaotic flood of profound publications offering people support in their flight from a highly complex society and propagating a hollow anti-rationalism.

Their main theme was the essential difference between the German character and Russian borbarism, French decadence, American technocracy and British mereenariness.

The authors found a basis for their views among social theoreticians such as Sombart (Shopkeepers and Heroes), Tönnies (Community and Society) and Klages (The Spirit as the Adversary of the

Many historians glorified Germany's "heroic" eras and its leaders, a theme seized upon by the theatre and film industries to inflame the emotions of those people who were inwilling to accept the Weimar Rapublic.

Not all cultural movementa during the Weimar period were a withdrawal from the world. The Bauhaus group tried to fashion the new environment. Expressionist musle, films, ilrama and art was the expression of a revolutionary uprising against the stato of the world but it remained non-political and without a

New Objectivity replaced Expressionism and sought to attain a position in the real world via realistic presentation, accurate reporting and naturalist idloms.

This all attests to the vitality of the intellectual movements of the time but

awareness had always been on the pol- this outsiders' culture had already liecayed when the appeal for an ordered and simple life in an organic community with leaders and the led had proved triumphant.

The sequel to the cultural activity of tha Weimar Republic were the expulsions. deportations and emigrations of those people who were unable in the long run to maintain their position as insiders in a society whose established basic structures had been preserved from the

This cannot be illustrated more clearly than by the attitude of the distinguished German scholar J. Peterson when he objected that President Ebert and Reichstag President Löbe were to be invited to Gerhard Hauptmann's sixticth birthday celebrations in 1922 on the grounds that two Social Democrats at once were too much for Berlin University.

The efforts of detente currently being undertaken by the Federal Republic towards the German Democratic Republic and the Eastern European countries are a good reason for remembering the continuity and discontinuity of German historical developments as they involve problems arising from the legacy and burdens of past history.

Ihindert Jahre Deutschland 1870-1970 tries to trace these developments in Gennany since Bismarck founded the Empire In 1870 and 1871.

The book sets itself the difficult task of documenting in photographs and articles on aga whose last section since 1945 seems to liave failen behind the pompous start marked by the proclamation of the Reich in 1870/71 in the solution of the nld political issue of Germany as u Notional State.

This only marks nut un outer fruine. work showing the hopes and illusions which are not always beneficial to solving the current German question.

1870 and 1970 are stages of a political process that destroyed many of the political illusions and hopes of 1870 and 1918 because of the avoidable acts and inexcusable arrogance of German policies.

Both the highpoints and the errors of this development are impressively documanted in this comprehensive volume. Of course the vardict on such a broadlybased work with its wealth of detail

cannot depend on a painsiaking of COMMUNITY AFFAIRS tion of individual points.

Cologne survey explodes myth of loneliness of the aged

Shortcomings of the type are per Cologna Sociological Rasaarch Instiniveitable but the book makes in the has Interviewed eight thousand by choosing pictures in such impression of the political come in differential and what criticisms social and cultural conditions of the present the editors have also succeeded the station.

> Tik quite usual today for old people to like on their own. Large families have slmon ceased to be and there has been a constant decrease in the number of wageneration households.

At the same time the number of old people has increased because of increased fe expectancy. The number of over-65s his doubled in the past fifty years. Do they need help? Must something be dune

Dr Blume concentrated his examination on former industrial workers and found their meterial fitture secure with un average mently income of over 300

But, he asks, should o healthy over-65 be forced out of his job just because of

There are two eonsiderations behind his questions. Fustly, doctors suspect than suddenly leaving one's job can lead to death and, secondly, psychologists chains that keeping prefessional life cuts a person eff from his environment and can lead to cemplete loneliness.

Neither ef the two theories apply to the majority of old people. 'fhe doctors' theory is quashed by the statistics. The mortality rate of 60 to 65 year olds is not much lower than that of the 65 to

The psychological theory is much vaguer as it depends on emotions. Dr states, "I've tried to find out how many old peeple feel lonely und are depressed by their solitude. Our findings has way confirm this overgeneralisation. Only an existencely small mimber of old people are depressed at being alone. It esnot even amount to one in ten."

Most of these lonely people - seventy en cat ef them - are elderly women my slone on a low income. Perhaps the inachl aspeci plays o role as well as a soman's greater need for contact with he outside world.

Mile formar industrial workers who we alone have an average monthly tome of over 300 Marks, widows have has than two hundred, a fact that is not lien enough consideration in discussions on intequality of the sexes.

As far as men are concerned, the survey

shows beyond doubt that there are as many lonaly people among the 65 to 70-year-olds still at work as there are among pensioners.

Dr Bluma also corrects two other widespread misconceptions. Finding that many over-65s were still physically fit enough to continue working, he pursued the question of now many actually would

At present about one over-65-year-old in ten is atill working full-time, the majority of them self-employed. But no more than five per cent of industrial workers continue to work until they are

But the situation was revealed even more clearly. About half the industrial workers said that they would like the retiring age to be lowered, and this in an aga when income (which then decreases) tends more and more to determine a person's social position.

This wish does not conceal the intention to draw a pension at as early an age as possible and improve upon this income with a part-time job.

Only one pensioner in ten has a part-time Joh. Even then it is rarely former industrial workers that are involved but civil servants, public officials and, though not so common, white-collur workers.

The other misconception Dr Bluma clears up is the one concerning the much-lamented loneliness of old people. More than half the over-65s in the cities have a home of their own that they do not share with their children or other relatives. They live alone and like it that

It is often maintained that only the housing shortage or smaller humes prevent old neaple living with their married children.

But Dr Blume's investigations show that the reverse is true. Only a quartar of the old people wanted to live together with their children nr grandchildren. About half of those wire actually did live with their children dreamed of a home of

it must be pointed out by way of explanation that the survey - now included by Professor II. Thomae and Dr U. Lehr in Altern, Probleme and Tatsachen (Ageing, problems and facts), published by the Frankfurt Akademische Verlagsgesellschaft - was only conducted in citles and large towns. But Dr Blume is convinced that the situation is similar outside city life as well. Gerhard Weisc

Sociaty toses much by not taking advantage of the taiants of the aged

Old age alone should not bar workers from employment

The generation gap has long caused tensions between young and old and the factory floor and other parts of the working world are also affected.

Since modern staffing policies have bean concerned with creating a good atmosphere among employees, attempts have been made to trace the reasens for this conflict in professional life.

This country's Economic Rationalisation Board has been conducting investigations in the United States, It found that 41 per cent of all American firms in the past three years had no fixed rule on how young a new employee should be. Forty-threa per cent considered older employees to be more productiva. It is also reported from America that only nina per cent of the managers in 86 firms are vounger than forty.

Tha Confederation of West German Employer Associations calls for positions where older employees can still davelop. About one fifth of the working force in this country is over 55.

The Rationalisation Board commissioned 33 different time-and-motion atudies to find whether there is any Increase in the productivity of an older worker.

The time-and-motion studies were conducted at a number of firms and dealt with forty to sixty-yaar-olda. Employeas in this age ranga found that not enough was being dona for them. They live in the continual faar that they might be sacked overnight.

When the demands placed upon them were not very exacting, the more likely it was that they would flop. Conversations with older workers confirmed this. The more intelligence a job demanded, the less bkeiy it would be that the employea disappointed. On the contrary. A high percentage of suggestions for improve-ment were made by the over-forties. It was sometimes as high as fifty per cent.

Despite these welcome findings many workers are not so flexible. Sometimes they even complained that their stubbomness made itelp impossible.

Women were excluded from these eriticisms. Oldar female employees are today often preferred to their younger colleagues as they are thought to be rebable, friendly and on their toas.

An industrial doctor claims that the msn is a great benefit to her in professional life, even when she becomes older. Man above sixty on the other hand are

dismissed far too soon, the Banks, Trade and Insurances Union elaims. One parsonnel manager reports, "When I was first

appointed I was asked to dismiss an 'old man' of fifty. I did things differently and sought his understanding. Today he is my best empioyee."

The analyses conducted to reach thase findings were carried out separately at o number of firms. But the results show astonishing similarities: Older workers are often not used in the best way possible.

This must be changed. Mnny firms are now trying to give their oldar workars appropriata occupation on the basis of ha surveys. They are also trying to learn from past mistokes.

Personnei managers odmit that older workers must be judged in glowing terms. They are more faithful to a firm. Accident figures, even on modern machinetools are lower amongst older workers than younger ones.

They say that the dismissal of a worker over fifty needs the approval of the industrial committee and the workers

hannoversche Allgemeine

council. If diamissal is unavoidable, the firm continues to pay lus salary for eighteen months.

Other personnel managers olaim that they are unable to fill a lot of the positions they have for the over-fifties.

It is also said that the number of staff has decreased by sixteen par cent as turnover increased. But the older workers heve all climbed to lugher positions: "Word soon apraad that we had filled a whole class at a Hamburg career training academy with older workers who were promoted after passing their examina-

tions."
The white collar workers union has now drafted proposals calling for two to three weaks' paid leave for workers wishing to attend further training courses.

Older workers can thus improve their opportunities in professional life. Those who rely on what they learnt twenty years previously will have an increasingly harder time of things.

Large firms, in efforts to create a satisfactory public image often point to the low average age of thair staff. But this could quickly change. The apalysis has shown plainly that anyone writing off An industrial doctor claims that the naturally andowed adaptability of a wobut is also acting against the interests of his firm. With retraining, many reliable old workers could prove to be a high productivity factor,

BOOKS

Jackets are book windowdressing

Gundel Gelbert has been trained as a salesgirl for books. Every day her colleagues in the bookshops of West Germany see Gundel's figure. Sha is also a part-tima model and she is to be found on the cover of the German paperback version of Gora Vidal's collection of essayo Betrachtungen auf ehrem sinkenden Schiff (Observations on a sinking

Actually from the hips upwards Gundel is covered - with the Stars and Stripes. The American flag leaves only her right arm free, and this she raises on high, in her hand there is a phallic symbol. Her left hand cannot be seen, but it is holding a visible tommy gun.

This book decorated with Gundel Gelbert, back oud front, is selling well according to the publishing house Kiepenhauer and Witsch. In fact the amied, perverted Statua of Liberty has little to do with the themes of Gore Vidal's essays, but without doubt it is an attraction for the customers.

Graphic artist Hannes Jähn received the first prize at an exhibition of West German designers (Der werbande Umschlag, 1971)

for his tempting morsel.

Gora Vidal is not after all one of the most Puritanical of authors. His noval Myra Breckinridge, a satire on the fashionable pomography of Hollywood films is proof enough of this.

Nevertheless he complained to his West German publisher about using this work of Hannea Jähn for the cover of his collection ofessays.

With the advent of pop-art burn-art bacame a fashion for the designers of paperback covars. Pop is popular, it has enriched the language of graphic designers and is an amusing Ironle comment on society unchained.

The fashionable bum would presumebly still be charming if it graced the

Jackat by Frenz Haacken (1950)

front of a book of logarithmic tables, but then the craze of book designers would finally be recognized as creziness.

Such craziness was not in evidence at the most recent axhibition of the Deutsche Literaturarchiv at the Schiller Museum in Marbach, entitled Buchumschläge 1900-1950 (Book covers...)

Nevertheless there was no lack of curios at this exhibition of this specialised field of design from the first half of this

Even as recently as 1945 a book cover was banned by a Zürich censor because it showed an elegant lady slightly exposing a shoulder and this was considered a bone of contention!

in 1932 Berlin authoritias called for tha cover of an edition of Upton Sinclair's novel Alkohol to be changed; it showed o massive bottle of whisky with a drunkerd clinging to it. The point of the objection was that the bottle clearly showed the name of a famous distiller.

The firm in question objected to Its name being used in this way. Molik Verlag, the publishing house in queation, was not perturbed by this injunction, in place of the firm's name and the brand of whisky it printed the text of the injunc-

tion. Once again tha distiller in question raised legal objections. This interesting story was cut short by the advont of Hitler and his Nazis. They banned the whole publishing

The sama publishing house and the same cover designar had already had a spot of bother back in 1927 and this tima the aristocracy was involved. The objections were raised over the cover to Harry Domela's Der falsche Prinz – Mein Abenteuer. Im Gefängnis zu Köln von ben. (The bogus princa - my life and

adventures, written in Cologne prison). The cover of the first edition was decorated with a picture of the prince. On the second edition this pictura had was removed altogether and replaced with a report on the whole incident which read: "According to the judgment of c Berlin court on 26 Jamery 1928 we have been definitively prolubited from publishing a picture of the genuine Prince Wilhelm of Prussia on this cover as on eorlier editions of this book. The young gentleman in foct nu longer belongs to contemporary history according to his own judgment and that of the court. Moraover it is detrimental to the honour of the Hohenzollern family for a picture of a membar of that fomily to be placed next to one of Herr Donicla..."

Tids is a highly unusual exhibition of an ort medium that has received little attention and demonstrates clearly the schizophrenic situation of ertists such as thosa who design book covers and have to serve consumer society.

This dichotomy was underlined by the anger of Marcus Behmer who muted on u postcard in 1957; "I connot stand this treatment of ort and ortists by such 'publishers', this 'supplying' uf work which is sold as 'art' but is ordered as 'goods'... Publishing hnuses of this kind should carry a sign saying 'main entronce for fine people only; tradesmen's entrance round the back".

Book covers ore proof that literary themes are often cocreive for ortists to edapt themselves to contemporary history. The conservative kind are generally also consarvetive in their choice of meterlals. They tend to go for the ldyllic, lo make things heroic, to employ antiquated ornaments and to make decidedly bourgeols woodcuts.

The progressives are a different kettle of fish. They seek a new means of expression in order to do justice to tha social aspecta of tha book they ara illustrating and those aspecta of it that are concerned with sociel criticism,

They use caricatures, collages, photomontages, biting satire; like Otto Dix and George Grosz, who wrote in the foreword to his Spießer Spiegel (Reflactions of petty-bourgeois) of 1925: "I consider drawings a good weapon against the present-day Middla Ages. I like to be a conscious moralist and aatirist..."

John Hartfield, who was reaponoible for the offending whisky bootle, is even more open about this than Georga Grosz. He reckons that political convictions are at least as important as effective advertising. in his Leben und Werk (Life and work)

he says decidedly: "Even the cover of books can be brought in to the cause of agitation in a new form. We said that there were many paopla who look at books without evar buying them, there-fore every single book should be effective been oblitarated and from the point of view of its appearance on tha third edition it as well as what it says inaida. They are also barred from employing any representative included on the black list.

Selling directly through door-to-door representatives raises specific problems for the book trada mora than any other retell branch. Books are not a commodity for which there is or is not a basic need. The damand for books is not at all widespread.

It has sometimes been looked upon as part of the task of education to help broad sections of the population on the path towards reading habits os they would not amburk on this course of their

This informative espect stood in the foreground when most of the book-clubs atil existing today, or their predecessors, were set up after the First World War. "Books for the people" end "Knowledge is Power" were the slogans of the time.

It was only sensible not to wait until more end more people entered a bookshop of their own occord. We still talk today of the lock of self-confidence which stops people from passing the threshold of a bookshop.

Tours, weeping, laughter and suffering ere in the forefront of discussion. Heinrich Böll, or rether the narrator of lils lutest novel Gruppenbild mit Dame, looks up the definitions of these states of emotion in a "seven-voluma dictionary published by o controversiol firm".

"Pain" is defined by the dictionary whereos the word "heppiness" is missing. The word "bliss" on the other hand is described as "the fully painless and guiltless stote of complete end etarnal happiness, considered by all religions as the aim of world history".

On the surface Boil's novel in which the narrator assumes the role of researcher seemo to be set in the present. Land apeculation, Rachmanite landlords and ne misery they cause are all exposed and

criticised But flashbacka take up most space in the novel as we experience the pre-war yeera, the war years and the post-war

years of a large Rhine city. The Western fortifications are built, teenagers are called up for war servica and ombo drop. The wraath-makers work

in mind from writing a novel set in the present and incorporating social criticism. Böll wanta to show what it is that enables people to tolerate life despite all suffaring, maanness, betrayol and ahabby

profiteering. In short passageo Böll depleta in a

it can be taken for almost certain that the majority of the four million book-The files run by the Subscriber Enrol- club members in the Faderal Republic are newly-won readers who would not have been captured so quickly by the ordinary

retail trade. Book-clubs grant reductions of anything up to forty per cent of the normal retail price of a book. Reductions of this size thay will have a firm number of subscribers.

Max Repschlägar, managing director of the Federal Association of Mail-Order Book Retailers, provides another argument in favour of book-clubs and doorto-door salesman.

In an articla written for a book dealing with this country's book trada ha states. There are some 25,000 townshins in the Federal Republic but only four thousand bookshops. As there are a large number of towns with mora than ona bookshop, there are practically 23,000 communities without bookshops. Their inhabitants are forced to traval or use a mail-ordar service if they want to buy a

Selling books through salesmen is therefore an important way to reach potential readers who would not otherwise be in a position to buy books. Door-to-door sales will become indispensable if bookshops die out as forecost.

There remains the feet that nobody can be forced to educata himself. Max Repschläger stotes that the Federal Court of Justico recently decided that "fraud can be proved when a consumer is induced to order printed products that do not correspond to his loval of education".

Book-clubs robbed this argument of all its substence a long time ago when they added records and games to their stock of books which can incidentally range from between 25 and 700 titles.

Works offered are not always the most demanding reading either. The real bestseliers of our book trade, thanks to the book-clubs that sell far more copics of them than normal bookshops, ore works such as Margaret Mitcheli's Gone With the it'ind, Anne Golon's Angélique series aud Annemarie Selinko's Desirée.

Knowing this fact, it will be realised that the books offered do not demand too much from readers. Unfortunately this means that the informative aspect is being rather neglected.

The situation is different with publishers of dictionaries, works of reference or specialist literature. A larga number of these productions would never get off the ground if it were not for the salesmen canvassing for purchasers or subscribers.

These books require not only publicity and a large turnover to cover the costs of production. They also require relatively

No bookshop would be able to guarantee this today and neither the publishers nor the booksellers could afford the costo arising from a long period of storage.

If distribution were to be solaly via the bookshops instead of through the various channels amployed today the relatively expensive door-to-door selling would not become cheaper but would rise and rise. Moreover, dictionaries and referance works do not start making a profit until new editiono are printed.

if door-to-door selling were to be restricted in this field so in others it would mean that we would have to do without most dictionaries, works of reference and expensive specialist literature.

The German Democratic Republic provides a good example of this. Door-to-door selling is banned there and there are no encyclopeedias. Elke Trappschuli

(Handelsbiail, 2 August 1971)

New Böll novel shows love in war

wondarfully moving way sometimes re-miniscent of Dostoyevsky how a person can become human in the midst of death and terror.

Wreath-maker Leni pours soldier Boris cup of coffee only to have it struck out of her hand. She washes it ("es if it were a holy chalice"), refills it and brings it once again to the Russian.

This was e dangerous act in the winter of 1943 and 1944, a political act that could lead to a person's axecution. But Leni dares it.

A witness reports, "Borls was made human, declared a human, by Lenl'e courageous act - and that was despite all

the awful things that were yet to come."

These "awful things", pursued by Böll with sharp eye and bling satire through all the byways of corruption and unscrupulous black-marketeering, fill more than two-thirds of the excellently com-

Yet these ahocking events of a realistic- him as a constant eviction. ally described age do not give the book its apecial flavour. What diffarentiates Böll from other novellsta of our time is his Christian commitment.

Leni, tha heroine of the novel, is described right down to the smallest detail but ahe atill remains surrounded by an air of mystery.

She could be called a worldly saint. She is filled by a powerful love that can prevent the much-troubled heroins from as a writer. Kurt Lothar Tank being evicted from her home.

EDUCATION

Frankfurt playground scheme wows the kids

Rölner Stadt-Anzeiger

he grounds of the Frankfurt Trade L Fair are being put to a completely different use. The city's children havs tsken over the main half and large exhibition half which are normally the meeting places of economists and indistrialists from all over the world.

Thousands of them flock there dsily for model-making to play music, stage plays, play games, let off steam or just do nothing. No one pushes them ar orders them about. Nothing is forbidden during what the city's school authorities call the

most adventurous holidays in Frankfurt. This giant children's pleyground has been named the "Children's Planet". Children are allowed to do here what is not ellowed anywhere else. The very name - selected from suggestions made in a children's competition - is indicative of this fact.

The winner of the competition is an eight-year old girl who chose the name because she wanted children to beheve in the halls as if they alane ilved on the planet. Parents have no place on this children's planet.

Her wish is exactly what the organisers, a working group from an Offenbach the Frankfurt school authoricollege and

They balieve that children can only develop treely when they can choose what they want to do without restriction, rules or orders. The children must enjoy themselves — that is the only thing that

Time has shown that this ides was right even though it did not seem as if it would be at the beginning. Four thousand children stormed the tiade feir grounds

We have arrived safely. My name is Mira, My name is Nico." Nico and

on the tirst day and took possession of what was there. Six thousand turned up on the second day.

But disappointment lay in store for those people believing that the children would put the tools, musical instruments and sports equipment to serious use. The children's resction to this unaccustomed freedom was nothing but aggressive.

The abandoned cars parked for their use on the grounds were soon reduced to scrap. The children played "sccidents", allowing the cars to rsm each other. They then set to work with sticks and stones.

They attacked an old helicopter with large battering rams. Most of the tin cans for use as water receptacles in the paint shop were stamped flat under the deafening impact of hammers.

Thousands of children spent the whole day ridding themselves of their pent-up feelings of aggression. Good social conduct was nowhere evident. It was soon scen why this was not possible, however.

Those parents who had come atong with their children might not have reactcd with the same aggression as their children but their behaviour was just as

Confronted by the equipment supplied for the children's use, they seized hold of the plastia buckets and holdalls also provided for the children, filled them full to the brim with tools and materials and simply took them home.

The turbulence of the first few days aroused a storm of protest and the Christian Democrat opposition on the city council gledly took the worted

One mother phoned the city authorities complaining that the whole idea wes e lisgrace and not at all what sha end har husband had expected. "The wey things are now," she concluded, "you can only send your children there once. They wouldn't go willingly a second time,"

Education advisory centres

In a recent survey conducted in the Faderei Republic it was revealed that thereby one education edvisory centre for every 250,000 inhabitants. These estimates the set of (Photo: Kalfala) per cent of these men claimed to be

But the fears expressed during the first few deys soon proved unfounded. Much of the material had disappeared or been destroyed in the initial period of eg-gression but the children soon began to make the best use of what was left.

They used barrels, shelving and beams to build little huts on the trede fair grounds, often embellishing them with

Of course the public soon got upset once again. The boys and girls took the necessary material for their flags from the "dress shop" inside the children's plunet where it was being used for the imagina-tive eoslumes worn by those taking part

As the only meterial evalleble was red. the flags they hoisted were also red. The children saw nothing special in this. It wes laft to adults to read in it a deeper significence.

Pathologist investigates serving

soldiers' smoking habits

To the question: "is smoking a sign of activity, worldliness, manliness, elegence, sportiness, intelligence? 'less than ten per cent of all three groups answered with

Willpower, according to the soldier's opinions, is the most important factor involved in giving up smoking for good; Illness comes a long way behind in second plece in this consideration. Only ten per cent were willing to give up smoking because of price increases.

As regards prices, if cigarettes were to coat twice as much 819 soldiers of the group questioned would give up smoking, if prices increased by 50 per cent then B17 would smoke only half as much and 205 would smoke only three three quarters of the cigarettes they smoke now.

But 1,939 claimed that an increase in the price of cigarettes would not affect their smoking habits at all.

An indication of the relationship between price and the number of cigarettes bought was cleerly shown by the answers to the question: "How many cigarettes would you smoke were the prices to be cut by e haif? "

A surprising 3,560 soldiers said that they would continue to smoke the same number, only 120 seid they would smoke about twice as much and 42 men said they would smoke more than twice as much. The survey revealed that 291 of the soldiers questloned were less than 10 years old when they had their first "fsg". Between 16 and 17 they developed their dependance un smoking, possibly because at that age it is "ullowed" to smoke in public. As many as 1,741 said that at this ege they began to smoke regularly five cigarettes a day, or more.

The majority, 1,507, said they smoked between ten end 19 elgarctics e day now, end 1,149 soldiers said they smoked between 20 and 29. More than two thirds

said they inhalcd. Of those questioned in the survey. 2,654 believed that smoking led to

reduced performsnce whilst only 287 believed that smoking increased a man's performance generally. Msny of the smokers, 3,218, spoke of the calming qualities associated with cigarettes, but they also referred to losing weight and loss of sppetite.
Professor Hans Georg Fassbender re-

gards his survey as indicating that farresching measures for health education are needed in the armed forces. He said: "Basically we are responsible for our soldiers." Efforts to influence soldiers have had bttie effect. Only 28 per cent of those who took part in the survey were, according to their statements, edvised by anyone against smoking, it is essential up their own holidays so thet others can take a holiday. During their holidays these girls work in Cologne hospitals, old that especially during their military ser-vice soldiers should be given a better imsge of the non-smoker, people's homes and kindergartens in order to relieve pressing staff shortages.

Five per cent of those questioned began to smoke on joining the srmed forces and 31 per cent claimed that they smoked more than they did before, when they Walter Drohm joined the forces.

Stuttgart gives go ahead for better school for foreign workers' children

Tha Baden-Württemberg Education possible as classes run on national lines do Ministry has given the go-ahead for e not usually give as good an education. broadly-based experiment in the Federal state that may prove e pace-settar for the

New laws heve now been adopted to change previous methods. Up to now the 5,426 foreign children in Baden-Württem-Foreign children resident in Badenberg have been divided into 15g classes Württemberg have had to ettend school depending on their nationality. Here they there since 1964. Compulsory ettendance learn enough German to be eble to attend regulations will be edhered to more classes with local children.

strictly from the beginning of the new school yeer this eutumn. The education In future there will be more preparatory classes of this type if they are euthorities there have sdopted measures needed but they will not ba run on that are unique in the Federal Republic. Nico and Marla are the main characters

Direct method teeching will be adopted in an educationel programme developed by the Horst Erdmann publishing house us is tha dest wey to prepare children of various linguistic of Tübingen at the instigation of the groups intensively and quickly for lessons Education Ministry in Stuttgart, the capin German. There will be few exceptions to the German-only rule. The equipment includes e besic text-

Direct method teaching means that most value is placed on speech. There will book, e work-book beginning with the words "We have arrived safely", a teachbe no translation from the children's mother tongue. There will be no isolated grammer lessons. German grammar will be taught from examples encountered during conversation classes.

German as quickly as possible so that they can apend their life in this country free from divisive linguistic barriers thet Colloquial speech will be tought so that the children can also talk outside their lessons. During class the children will be They will also be incorporated into able to make the two puppets Nico end classes with local children as soon as Mira speak. This should help them over-

come their inhibitions end fear of making mistakes. Deily situations will be acted and the children provided with the relevent German tdioms.

The method's inventors are convinced thet foreign children from six to fourteen - divided into three groups dependent on ege - will be able to speak Germen so perfectly efter fifteen lessons a week for a yeer that they will no longer be at eny greet disadvantage when attending classes with local children.

Additional courses will be arranged for children who still have language diffialtles in spite of these preparetory classes.

The latest scheme represents e great improvement over past methods ea rural arees will find it easier to errange preparetory classes of this type now that the children no longer need be divided up into nationalities.

At present 130 teachers are being trained for work with this method and the new teaching material it involves.

Another new and up to now unique measura adopted by Baden-Württemberg is that foreign children who would otherwise have to attend a technical college type institution but are released from this obligation because of their linguistle

difficulties will be furced to attend class giving them tuition in German. The language courses given in the mother tongue to those children when

parents wish it will continue as before. It present there ere 326 such course it Baden-Württemberg.
Tha reason Baden-Württemberg 18 8

concerned ebout foreign children their education is that one foreign in three in the Federal Republic or met exectly 31.1 per cent, live in this Federal state. A further 28 per cent live to North Phicas Warth Phicas W North-Rhine Westphalia.

Today there are some 41,000 feet children ettending school in Baden in temberg including 2,300 et high saw 930 et other secondary schools and et special schools for the backward. Four per cent of all elementary and

pupils in the Federal stats are a children of foreign workers. In Mannie and Stuttgart this figure sometime es es high as thirty per cent.

Another step has been taken by Education Mintstry in Stuttgart con ing the education of these children June It commissioned the Edward Advisory Centre in the Swabian made Balingen to drew up a "qualitied psychological motive study" on the titude of foreign workers and

children to the German language.
Hundreds of foreign worker family
will be esked what thay do about school for their children, their language pullems and whet hopes and ideas they be for tha future.

Wolfgang Dietrick Zöllte (Frankfurier Rundschau, 26 July 191

smoking are

as dangerous for the health.

Professor 'Schmidt maintains: 'The digarette industry knows that if a cigarette is filtered too heavily it begins to taste straw-like, inducing the smoker to change to another brand. Isolating nicotine and tar is technically difficult and when it is

produced with its nicotine content reduced and becomes s "health cigarette" it would not be very successful commercielly. Professor Schmidt says: |"It is the nicotine content of e cigarette that attracts the smoker - often without him knowing the danger he runs. A cigarette without nicotine is lika a car without petrol. There is little to be achieved by producing a

■ INDUSTRY

In three years Vogelsang has transformed Krupp

rupp has been given e good polishing up and is now liright and gleaming. Three years after the crisis which shook the company to its foundations Chairman of the Board Günter Vogelsang was able to announce contentedly and with a high degree of self-confidence: "The threeyear phase of consolidation which we planned for the years 1968 to 1970 ran to schedula and has now come to an

But Herr Vogelsang, who was brought in to the company by the last of the Krupp dynasty Alfried Krupp von Bohlen und Halbech shortly before his death in July 1967 on the advice of his company manager Berthold Beitz wes being too

Herr Vogelsang, who joined Krupp in Essen from Mennesmann, has brought the Iron and steel empire from the edge of disaster to a healthy profit-meking position within the space of three years.

In his first yeer of office the company losses were 24,100,000 Marka. By 1970 Krupp's were enjoying e profit on the year of 110 million Marka. Herr Vogelsang dld not want to discuss earlier figurea - for e stert he wes not responsible for them and secondly he was quite prepared to let bygones be bygones.

Günter Vogelsang will be quite happy if he can embark on his third oim ofter restoretion of solvency and removal of the sources of loss-making ahead of schedule, namely an improvement to the basis of aelf-financing.

Krupp's top manager came to Essen vie a post in an aconomic assessor's office, Schlieker Wharves in Hamburg, Krupp for the first time, Mennesmann and then beck to Krupp. He listened to what the pessimists had to sey when he rejoined the ailing firm end then made liera of them ell.

The dismal ilmmles had prophesied that tha firm which had been taken over from the Krupp family end turned into a joint-stock company would not be paying any taxes before 1972, if then. As a matter of fact payments to the taxman increased from 59 million Merks in 1968 to 131 million in 1970.

And the foundation which is the sole proprietor of Fried. Krupp GmbH (basic capital of 500 million Marke) following the death of Alfried Krupp, can viaw the foture with much greeter optimism.

In 1970 Herr Vogelsang trensferred five million Marks to the foundation following two yeers in which it had to be content with the etetutory minimum of two million Marks.

And for 1971 Herr Vogelsang hes told Berthold Beltz, the Chairman of the Advisory Board end et the same time the Adminiatrator of the Krupp Stiftung, that

Ginter Vogelsang is making it his top priority to get the company back on to a firm basic again. One of the main requirements is an increase in the company's powers to finance its own investments.

In 1970 when turnover was 7,190 million Marks the firm was only able to provide 732 million Marks towards lts investments, 13,3 per cent of ite balance, an unusually amali percentage even in a branch of German industry that is not much used to having an excess of capital

Thus Gunter Vogelsang never tires of epeating that his main aim is to make a denied by those in the know. sufficient profit for greater reinvestment.

The past crisis is not the first that has struck tha house of Krupp. This was its

come tax who first introduced it exactly

The originators of this country's ineighty years ago in Prussia would collapse the government ond various asand saw today's taxmen arguing whether the top rate should be 56 or even sixty

When income tax was first introduced in 1891 the starting rata was 0.66 per cent rising to a maximum of four per cent. For a long time afterwards it was generally considered that an income tax of more than ten per cent would be like government banditry.

Today no one denies that the more you earn the more you should contribute towards State finances. In fact the greatest danger is of going to the other extreme. For the thesis that income tax is feirer if it gets progressively higher as incomes rise end the higher the top rate is, can be shown on closer examination not to be watertight.

Taxes are designed to tax the high income camer more heavily, but do not take into account the manner in which he has earnt this high income. But it can be shown that the greater number of those who have a high income from their main profession have to put in longer hours, expend more energy and endanger their health far more than the man in the low income bracket.

Whereas the number of hours in the standard working week for most jobs has declined in recent years the amount of work put in in the free professions (medicine, the law, etcetera) has hardly decreased at ull.

For the man who holds ell the responsibility and a leading position in industry, trade or politics a sixty-hour week is a normal occurrence. A free weekend is for more seldom forthcoming.

It would therafore be fairer, though far less pructicul, to take for tax purposes not the monthly income as a whole but the Income per working hour instead.

Of course it is not always the sheer joy of working that leads to a high output in s ofton essential to have a high degree of creativity end the wear end tear on nerves can be very great. The period in which e top salary is paid is, however, comparatively short.

Salar in the very suddenly without ever having to lift a finger to obtain it.

In addition to this it should be noted

Not only that, but when the professional man is working and earning in top gear he must at the same time be making provision for his old age. For the selfemployed Stete old-age Insurance is not yet eveileble.

feudal days.

planers and reforming zealots are high income earners are made to pay up manhours, but often a case of great responsibility — for instance a country

And the greater part of those who do earn well above the national average do not even start earning until well after those whose jobs require little or no Anyone who leaves school or an ap-

prenticeship et eighteen and starta wageearning then can run up as much as one hundred thousend Marks in Income more than the man whose training ends and career begins at thirty by the time that man is ready to start working. The taxman takes no account of this.

These are all factors to which the present income-tax system peys little heed. From the edministrative point of view this is not possible. The way to make the tax system falrer would be if it were possible to make a man's total life's cerning the basis for taxation.

Nevertheless points of view such as this must be taken into consideration whenever discussion turns to the scale of taxation on income and the level at which

the maximum rate must be paid. In the face of these problems certain consumer taxes would appear feirer than income taxes. For instance the use of materials that damage the environment, such as petrol, justifies e high level of taxation.

In fact with the oft-mentioned general poverty compared with private wealth in mind it may well be time to consider replacing the taxes on what you earn with more "socially justifiable" taxes on what

you spend. tdeas of this kind have been expressed in the texation plans devised by the SPD's Eppler Commission. In this respect thase plans are more prograssive than those conceived by the government in which

there are scarcely any new ideas. New ideas must also be found with regard to death duties. These are taxes where it is obviously fairer to make the burden progressivaly greater the higher the amount of money involved. If we are In professiona where the pay is high it to live in a society that is fair and just there must be some provision to maka sura that no one gets a large sum of

that often an inheritance does not endow children so much with wealth as economic power. This is a relic from the

If a genuine tex reform is to be

Economy continues to cool off

M unich's economic research institute levelling off of wage increases coupled with a drop in demand from home and of this year consumer spending will abroad will lead to developments with Increase far less rapidly than in the first regard to prices thet "correspond better" six months of 1971.

The increase in the emount of money eveileble for purchases will continue to level off. It is reckoned that elready a larger proportion of thie frea money is being saved than before.

Ifo foresees that the aleckening off of consumer demend will bring with it e smaller increase in productivity. In thase circumstances It seems likely that the process of relaxetion of economic tensions that grew weaker in the winter and spring months will be strengthened again as the economic brakes are epplied.

As over-employment decreases there should be less of a push for higher wages. The institute is of the opinion that the

to the concept of steble prices.

But for the consumer prices are likely to go on rising et the same rate. And Ifo forecasts that if our economic policy comes under the sway of those economic forces in the EEC that ere calling for the parity of the Mark to be fixed again in the foreseeable future the whole metter of stabilisation will be open to question.

The results of Ifo's tests on the economic cycle in June show that the process of relaxetion of economic tension continued. The guerentee of continued industrial activity from full order books hae been lessened with a cutback in delivery dates from 3.5 months in Merch ner after Japan and Hong Kong. to 3.1 months. (Oie Welt, 26 July 1971)

implement the ideas put forward by a group of FDP politicians, which have not come to frultion, but which provide for a peyment on the sum inherited to

replace the present deeth duties. This would mean that instead of the taxman picking up cash shares in the firm in question would be made over to government funds, which would distribute them among workers in the firm within the scope of the accumulation of

cepital wealth in private hands policies. In this way the inheritance tiself, but not the company and its competitiveness would be affected.

If auch a reform were introduced, taking in social and economic changes since the Prussian tex reform of 1891 it would be possible to talk of one of the great reform laws of the century, something about which the former Finance

Minister Alex Möller dresmt. But what Bonn has planned so fer Is nothing but a voluminous catalogue of changes to tax legislation.

Michael Jungblut (Die Zeil, C August 1971)

Trade treaty wanted to boost **Peking deals**

When they meet egain in the autumn the EEC ministers will deal with the question of Communist China and set the course for future dealings with it. In eddition to this the committee of oriental experts in the Federal Republic's economic circles will be preparing a new initiative for dealing with the People's

Republic of China. In Bonn it is considered likely that the ministerial directors in the EEC forcign ministries will begin preparatory talks on

this theme in the near future. The spokesman for this country's foreign office Guido Brunner atated: "Developments in Asia are en important consideration for Europe. It is quite likaly that these developments will be

during basic research work at fd . For some time scientists and engineers furt's Battelle institute to reduce to droplets smaller than anything zeed before, representing an impression of the state of the state

One straightforward procedure that is, however, applicable only to short-lived radionuclidea is to mark time. The radioactive agent decays and after a varying but specific period of time radiation is reduced to a nunimum.

In many cases, though, periods of several hundred years are involved, with the result that means of disposal must be found that will not present generations to coma with additional problems. An absolutely fails afe exclusion of radionuclides from the entire biosphera must be ensured for centuries.

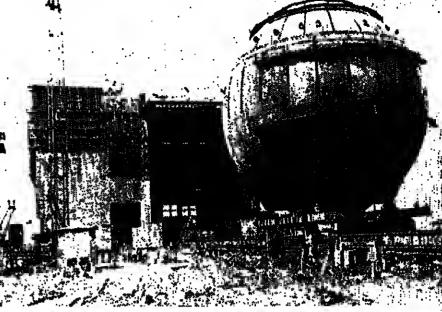

A practicable solution for this country and one that has proved successful in trials is to store atomic waste in old mines or natural or artificial underground cav-

The scientific basis of storing radioactive waste in old salt mines and underground caverns from which the salt deposits have been washed out has been the subject of work at Clausthal Zellerfeld since 1965.

Several thousands drums of low-radioactivity waste have already been consigned to the caverns and galieries of Asse 11, a disused salt mine near Wolfenbüttel that has been specially prepared for use as a repository for radioactive wastc.

At the end of this year work is to commence on the transfer of waste of medium radioactivity to the Wolfenbüttel

Starting In 1975 highly radioactive waste of the kind produced by fast breeder reactors (reactors that produce

finding a final resting place 2,400 feet

Disused sait minea have the edge on ore or coal mines in several reapecta. Salt deposita ara not generally connected with the water table and so have no link with the Earth's blocycle.

Also, one of the properties of salt is that it abaorba steam from the surroundlng atmosphere. Even in the long term, then, corrosion of the storage drums is a virtual impossibility.

Slight earth tremors and shifts cause rifts and chinks. Salt is so flexible that under the pressure of the earth above it automatically seala any faulta of this kind and prevents radioactive gases from escaping to the surface.

Highly rudioactive waste, like the fuel elements in reactors, not only produces radiation; it also generates a considerable uniount of heat. This presents scientists and teclinicians with grave problems.

Salt caverns again prove a satisfactory solution, in comparison with other stone, sult deposits are a good conductor of heat. Heat generated is swiftly exchanged with the surroundings and the atorsgo area is thus not overheated.

The excavation of caverns in sait deposits presents no problems whatsoever. Fresh water is pumped in via a 100-metre borehole and salt water pumped out. Caverns of various alzea and spherical or cylindrical in shape can be pumped out aa required.

Once it is filled with radioactive waste the cavern is sealed with a concrete plug and can be left to its own devices. The atorage capacity of existing or potential tacilitles is virtually unlimited.

The processing of waste, which occurs in a variety of forms, is a slightly Continuad on page 15

Brunsbüttel power station's nuclear

container

fter a year'a work at a point adjacent A to the site of the Brunsbüttel nuclear power station, which from 1974 will supply North Germany with nuclear power from the Elbe cstuary, the enormeus shect steel safety container has been completed.

Spherical In shape, 27 metrea (82 feet) in diameter and weighing 1,000 tons, the container has embarked on its journey to the reactor building. The 110-metrc journey will take a good week.

The container is being rolled, pushed and hydraulically rammed into position and once it has reached its final restingplace will be bound with the reactor wall and the apening to the cast through which it made its entry sealed off with reinforced concrete.

The container will house the nuclear steam system of what is to be a lightwater renctor. With a gross capacity of gog million watts Brunsbitttel will, a year after the inaugration of Stade and Wurgassen power stations, he the largest nuclear power atation in the north of the cuun-

Pundits predict that by 1980 the proportion of power requirements gencrsted by means of nuclear reactors will have increased from the present four per cent to roughly a third of the total.

At present twelve nuclear power statlons are either under construction or at the planning stage and seven are already in operation. One of the largest will be Biblis, near Darmstadt, generating 1,i50 megawatts.

SHIPPING

Hapag-Lloyd to discontinue transatlantic services

S plendid perties and sweating stokers, smoking funnels and the company's blue band ensign between them characterise a fascinating era in the history of German and International shipping that is now coming to a close.

Hepag-Lloyd, the country's largest shipping line, has now decided once and for all to discontinua regular passenger services on the North Atlantic nin at tha beginning of naxt year.

Hopelessly outclassed by competition from the world's eirlines ocean liners are no longer an economic proposition. The Europa and the Bremen will in future run

For mora than a century the two major German lines Norddeutscher Lloyd of Bremen and Hamburg-Amerika-Packetfahrt (Hapag) - they merged a year ago were Britain's major competitors for the Blue Riband the prized flag designed, as it were, in initation of the Order of the Garter for the fastest liner on the North

The first Bremen set out on its maiden voyage on the sultry afternoon of 19 June 1858. Ninety-six metres (315 feet) long, Norddeutscher Lloyd's first steamer liner reached New York in fourteen days.

Hepag of Hamburg (the two cities have always been fierce rivals on the high seas) was well and truly trounced. its 750-GRT Deutschland, one of the fastest sading ships of the time, took some 42 days to convey twenty cabin passengers and 200 deck passengers to the eastern seaboard of the United States.

Blue Riband

As the transport of German emigrants was proving an increasingly lucrative proposition the two lines built in the course of subsequent decades numbers of larger and faster steam liners to cut the time it took to trovel to the land of unlimited opportunity.

Not until the end of the nineteenth century, however, did German shipping represent serious competition for Britain. In 1897 Hapag's 14,349-GRT Kaiser Wilhelm der Grosse, an impressive steelclad vessel boesting a collection of fun-nels and comfortable decor, first won the Blue Riband for Germany.

Withelm if, the reigning monarch, was most interested in everything to do with shipping and encouraged shipowners to adopt ever more edventurous policies.

Shortly efter the opening of the Kiel Canal in 1895 the Kaiser started the major confrontetion between tha two companies. Both had gone to enormous trouble end expense to ensure that tha Kaiser end his retinue first made the canal crossing from the North See to the Baltic on board their flagship.

When the Kelser enno would cross first on board the Imperial yacht Hohenzollern followed by tha Germen princee on board the Lloyd flagship a small, unremarkabla man, as contemporarias described him, got up and told the Kaiser thet the Elba and its approaches were Hamburg territory and that it was a matter of course that tha princes travelled on board a Hapag ship.

The man was Albert Ballin, whose name is inseparebly linked with the emergence of the Hapag as one of tha world's mejor shipping lines.

The Kaiser replied to the effect that this was local potriotism par axcellence

Münchner Merkur

THE GERMAN TRIBUNE

and promptly arranged for the princes to travel on the ship of tha larger line, Norddeutscher Lloyd.

Bailin in return resorted to a stratagem. He saw to it that major journalists covering the event travalled on board Hapag steamers and publicised the fact. This piece of effrontery impressed the Kaiser who became a good friend of Ballin's. A few years later Ballin became Hapag'a managing director.

In the first decade of this century German slupyards built increasingly larger end faster liners for the two companies.

Ships that made maritune history such as the 50,000-ton Imperator attracted thousands of onlookers as they steamed in and out of port. Liners such as the Fürst Bismarck and the Vaterland were felt to be the latest thing and miracles of technological precision.

The ship's interiors were iuxurious in the extreme after the fashion of the period. Crystal chandeliers lit purpla salons and genuine Meisaen porcelain, nothing but the best, accompanied the hoi-poiloi on their travels.

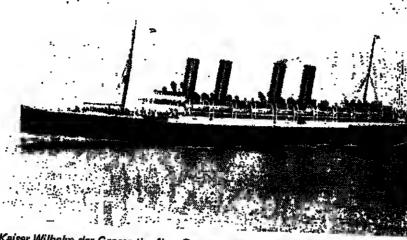

The passage to New York eost, first class, 8,000 gold Marks, a staggering sum of money for those days. Deck passengers paid a mere i 10 Marks for their hord wooden bunks, rats and cockroaches.

The emigrant trade reeched its peak at tho turn of the century and made both lines considerable profits. Norddeutscher Lloyd celebrated its ten millionth passenger in 1913.

Gigantoniania and tempo mania were dealt en obrupt blow in 1912 when the Titanic sank, coating 1,700 lives, in an attempt to regain the Blue Riband the captain had chosen s dangerous northern route and steamed at full speed into an iceberg. The band played to the last as the unsinkable giant made its way to Davy Jones' Lockar.

The First World War well end truly put paid to Germany's gigantic ocean bners. Not until 1929 did Norddeutscher Lloyd's new Europa regain the Blua Riband by crossing the North Atlantic at an average speed of 29.701 knots.

Kaiser Wilhelm der Grosse tha first Garman liner to win the transatiantic Blue like day of their careers; women tend to tell

Opel sponsors last soap-box racing Derby

C oapbox racers hove seen the last of a benefactor who hos done them proud for many a long year. After a Duisburg rece a spokeaman for Opel, the motor manufacturers, announced that "Tho 1971 national soapbox-rocing champion-alups were the last to be held under our patronage.'

Ekkehard Rohde of the Opel boord commented that "We ore now convinced that in the wake of tampestuous technological development, above oil os a resuit of increasing demands on young peopla's knowledge and ability, specifically in the safety sector, our youth work must be more broadly based.

it remains nonethaless to be seen whether this will be curtains for a form of racing for young people that dates back to the turn of the Century in the Tannus region, near Frankfurt.

At prosent top-level negntiations are in progress between Opel and ADAC, the motoring organisation, with the oin of onsuring that the ADAC at least maintains the national championships and possibly introduces equality of the saxes in the Soapbox Derby.

For soma years now young girls have written indignant latters to the company asking why only boys between the ages of eleven and fifteen are ellowed to enjoy the thrills and spills of soapbox recing.

Thie year e special race for girl com-petitora was held at Duisburg but the winner stood no chanca of representing thie country in the world championships.

Psychologist examines men's hopes from life

abecker Nachrichten

nychologist Dr Ursula Lehr of Bonn spent hours listening to the life wit of 120 average women as a means assessing changes that might have come bout in what women expect of life.

For men their life stories are largely the (Photo: the story of their marriages. Yet nine out of the of the sample had been working

> ia the cheumstances the emphasis on the marriage indicates how little women have succeeded in gaining self-confidence

liand, is off to Akion, Ohio, sada. Men attach a certain importance to the

that such changes as occur will probably

They have come io realisa that they are not gowing any younger and ore con-fronted with the fact as each day passes. DIE WEIT Fortunately this mood does not persist.
At about the sge of fifty a change occurs. The over-fifties feel fairly confident

organised the first race with 330 cm petitors and 40,000 spectators in 1831 of the Second Wurld War soaph of the US army of occupation. Region soopbox championships were held a cities and towns in the American Toris.

The over-fifties appear to have grown used to the idea of age end to have come 1949. The organisation was taken onth whel that "We here reached our best, A thope it stays this way" end "We have inter had it so good."

Oldy enough, Dr Lehr notes, it is the over-filles who are most interesting in proadening their horizons.

the world, to see and experience a The rules and regulations specify the "Driver and vehicle together may as weigh more than 113 kilogrammes (2) likely seem, women feel that they can weigh more than 113 kilogrammes (2) less attention to the family end themselves for once.

The are the grandmothere who ere that interested in their granddistributed in their grand-distributed in the state of t

to travel, to participate in social ad to attend concerts and theatrical involved precipitation and evaporation

performances is mainly expressed by women whose marriages are a auccess.

Older women whose marriages are subject to severe strain or whose hus bends have passed away are more interested in further education, reading and social activities. They also have more time for their grandchildren.

Why are the forty- to fifty-year-olds so afraid of changes? For one, because they are unable to find a new direction and purpose in life.

Time and time again the case histories ndicated that woman in this age group clung to past obligations, duties moreover that they hed always felt to be a burden.

They often feel that these tasks represent the meaning and purpose of life, regardless whether it is a matter of looking after the grandparents or caring for grown-up children who will soon be establishing families of their own.

This decade differs decidedly from all others in that there are next to no plans for the future. Oddly enough the twentyforty-year-olds and the over-fifties both have high hopes and plans. In this respect they differ not a jot.

In intensive analysis of the 120 case histories Dr Lehr notes that a woman'a attitude towards children varies considerably as the years pass. Periods of intense nttachment during which the mother does not want the children to leave home are followed by periods during which she would be only too happy if they would stand on their own two fect.

it is hardly surprising that the over-fifties would like to see the back of the children so as to be able to enjoy their own lives and are afraid that the children or grandchildren might thwart their plans.

What is surprising in that the thirty- to forty-year-olds also feel this way wherees the over-forties feel precisely the oppo-site. They are afraid that the children might want to make their own way in life at too carly an age and do their ievel best to keep the children dependent on thenseives in one way or another.

Age is by far from the only consideration, though. One reoson why a mother is bent on keeping the children tied to her apron strings is her fear of the mother-in-Dr Gerhard Weise

One teenager in twenty has tried hashish at least once

STUTTGARTER ZEITUNG

The Federal government faces serious problems both in combating the trade in narcotics and in providing information about the misuse of drugs.

This is the tenor of a written answer by the Ministry of Health to a perliamentary question tabled by the Christian Democratic and Christian Social Unions.

At the same time details of a poll conducted on behalf of the government's Press and Information Office to determine the general public's attitude towards hashish and LSD were released.

According to the survey one over-sixtean in twenty has tried out hash at one time or other. in the sixteen- to nincteenyear-old age group the ratio is one in five.

In this age group 63 per cent stated their willingness to try hashish out where-as among the population as a whole only ten per cent would be interested in trying it out for themselves.

Among the population as a whole 82 per cent are opposed to the idea and three per cent are don't knows. Among sixteen- to nineteen-year-olds only fourteen per cent are opposed to the use of cannabia resin and four per cent undecid-

The Federal government had no comment to make on these figures, evan though they indicate that many young people are potential pot-smokers. it is merely noted that further work on the consumption of nareotics is in progress.

The parliamentary reply also indicates that the government has inunched e considerable number of information campoigns on the use and effect of drugs.

Bonn does not feel itself to be in position to meet overall demand for nformation on the subject. All it can do is lend support to pilot projects and supra-regional events. In this way the Ministry of Haalth is doing its bit to boost the number of people able et a

local level to provide information for the general public.

In conjunction with the Ministers of the Interior of the statea the Federal government hes takan meesures to combat the illegal trade in narcotics and the

equally illegal import of drugs.

The Federal and state CIDs ere continually to compare notes so as to be in e better position to assist in investigations.

Customs officials have been mede acquainted with simple procedures to determine whether or not a substance ia hashish and police dogs have also been trained to spot narcotics.

CiD narcotics work, particularly the exchange of information, is to be improved. Foreigners sentenced in this country as narcotics dealers will, the states have agreed, now serve their sentences in full before being deported.

Turkish sources

The parbamentary question oiso involves the extent of internetional cooperation. The Federal government notes that some eighty per cent of the heroin diegally traded in Europe end Asia is refined from Turkish popples. Turkey is thus of major importance es a source

Bonn notes that the Turkish government has in recent yeers consistently reduced the ecreage und cultivation. Premier Demirel reduced the number of provinces in which the cultivation of poppies was legal from twenty-one to

On 29 June Premier Erln's govomment banned the cultivation of opium poppies entirely as of autumn next year except to meet medical requirementa.

The Federal government has not stated whethar it expects the bnn to heve any perceptible effect on Illegal heroin imports into this country.

(Siuligarter Zellung, 6 August 1971)

Continuad from page 13

different matter. Contaminated matter such as paper, gisss and plaatic can be dealt with relatively easily but occounts for only e small proportion of the waste thet eccumulates.

Most waste is dissolved or suspended in reactor effluent. Radioactive gas and contaminated exhaust containing radioactive particles and eerosois also occur.

There are e number of chemicel processes, precipitation and filtration, by which these radionuclides can be separated and solldified. So-called absolute filters extreet up to 99.97 per cent of redioective matter.

Once suspended radioactive matter has been filtered out of radioactive gases such es helium 3 or carbon 14 they are only slightly toxic end can be released into the atmosphere without misgivings.

In cases where radioactive itquid is

Radioactive waste in disused mines

have proved e success. After decontamination up to 99.99 per cent of redloactive matter is concentrated in the remainder which is then given an admixture of glass-forming material and meited into blocks of convenient size.

Low-radioactive waste can, together with the left-overs of gas processing and contaminated matter that is already solid, be reduced to ash in newly-developed

The first incinorator of this kind recentstarted to work at full capacity at Karlsruhe nuclear research cantre. At e temperature of roughly 1,000 degrees centigrade some eight kilogrammes of

Woste is reduced to a hundredth of its previous volume and the ash contains some 99 per eent of previous radioactivity. Ccramle filters purify the exhaust, which is emitted via a chimnay highly resistant to acid and heat.

Tha incinerator is highly compact and reliable and elwaye ai less than atmospharic preasure in order to prevent toxle radioactive metter from esceping Into the atmosphera.

Solidified and packed into handy drums, the radioactive esh is finally transported to the Wolfenbüttel selt mine, its final resting-ploce.

Known processes for dealing with nuclear waste ensure that the disposal of waste will present, as far as can be foreseen, no problams es far as existing end projected nuclear power atetions and experimental reactors are concerned.
